

Dryland Pasture Mix

A mixture of hardy, cool season grasses, that are drought tolerant and adapt well to the Northern Great Intermountain regions. It provides a good, palatable spring forage and fair regrowth in the fall. This mix may produce a hay crop depending upon available moisture. Widely adapted to many soil types and elevations of 3,000 to 10,000 feet. Ideal for areas not receiving regular irrigation.

Grows 30-48 inches at full potential. Great forage and hay producer.

Bunchgrass with germination in 14-21 days.

One of the earliest species to exhibit growth in the spring, making tremendous forage potential during cool conditions.
