

JUMPSTART

KENTUCKY BLUEGRASS

DESCRIPTION

Jumpstart, is fast to establish, fast to recover, and fast to green up. It is a medium dark green, medium fine-textured, durable density, elite Kentucky bluegrass with improved heat tolerance. Jumpstart's vigor and responsiveness allow it to compete with perennial ryegrasses, as well as weed species resulting in improved establishment in golf, sod, sports and lawn turf seedings.

APPLICATIONS

Use for athletic field, and golf turf blends and mixtures. In super-competitive situations like over-seeding into existing stands, and using mixtures that contain perennial ryegrass, Jumpstart will establish well, and tolerate wear, resulting in more Kentucky bluegrass in the stand. Jumpstart is also a key ingredient in sod seed blends, producing harvestable turf faster.

GEOGRAPHICAL ADAPTATION

Cool season and transition zone where Kentucky bluegrass is used.

FEATURES & BENEFITS

- Quicker Establishment
- Earlier spring green up
- Better fall color retention
- Strong wear tolerance
- Faster recovery from drought & stress
- Improved pest resistance

PRODUCTION AREAS

Washington, Oregon

RATE

Overseeding 1.5–3 lbs./1,000 Sq. Ft.

New Seeding 2-3 lbs./1,000 Sq. Ft.
