

Salty/Alkali Pasture Mix

Characteristics:

Drought tolerant High palatable
Does well in Alkali Soils

Seeding Rate:

New Seeding

Broadcast: 50 lbs/acre

Drilled: 25 lbs/acre

Overseeding

Broadcast: 30 lbs/acre

Drilled: 15 lbs/acre

Mix contains

10% **AC Saltlander Wheatgrass**

Has aggressively spreading Rhizomes with germination in 7-14 days and can get 21-53 inches tall. A long-lived perennial, cool season, very drought tolerant grass. AC Saltlander is highly palatable.

10% **Garrison Creeping Foxtail (coated)**

Sod-Forming grass with germination in 12-14 days.

A long-lived perennial, cool season, grows 12'-24' tall. It is extremely winter hardy and recovers quickly from grazing due to its numerous aggressive underground rhizomes.

20% **Tall Wheatgrass, Hercules**

Bunchgrass, with germination in 21 – 28 days.

Perennial, cool season, grows 3 – 7 feet. Hercules persists in high saline conditions and is highly palatable and has high forage yield potential.

20% **Forage Perennial Ryegrass**

A perennial, cool season, germinates 5 – 8 days, introduced bunchgrass growing to heights of 18" to 36".

Perennial Ryegrass is one of the most widely used grasses and is adaptable to a wide variety of soils and climatic conditions.

20% **Forage Tall Fescue**

A long-lived perennial, cool season, germinates 7 – 10 days, introduced deep-rooted, bunchgrass growing up to 5 feet. Tall Fescue is endophyte free.

20% **Smooth Brome**

Sod forming grass with germination in 10-14 days

Smooth brome is resistant to drought and extremes in temperature. Smooth brome is the most widely used of the cultivated brome grasses.
