

BLUESTAR

Kentucky Bluegrass

Poa pratensis

DESCRIPTION

BLUESTAR provides high-quality turf with a beautiful dark green color and excellent density, which slows weed invasion and reduces the need for herbicides. It has very good resistance to both stem rust and dollar spot. An aggressive root builder, BLUESTAR withstands heat and drought and performs well in sun or light shade. BLUESTAR has a low-growth habit that reduces scalping and clippings when mowed. When used in a program of high fertility and managed soil pH, it will spread and withstand wear, traffic and mechanical damage

APPLICATIONS

Home lawns, Commercial turf, Parks, Cemeteries,
Recreational & Sports turf
Golf course roughs
Sod production

Always blend bluegrasses from 3 or more types for improved genetic diversity

GEOGRAPHICAL ADAPTATION

Excellent quality throughout all cool season zones.

SEEDS PER POUND

~1,100,000

FEATURES & BENEFITS

- Consistent performer that provides excellent turf quality.
- Excellent turf density with medium to fine leaf texture.
- Resists dollar spot and stem rust. It performs well in sun and moderate
- Improves wear tolerance and sod strength.

PRODUCTION AREAS

Pacific North West
